

SNAP Map Questions

1. When do they expect the program to be compatible with Mac Computers?

Interplan the company responsible for the SNAP program hopes to have a program computable with Mac by the start of the 2008-2009 school year.

2. Since schools are required to do this every year (by law), can we just turn in a copy of their plan updated plan each year, or are we supposed to re-do it?

You are only required to turn in a copy of a school's SNAP plan with your reports when the school is going to achieve Bronze level. You should maintain the criteria by updating the map each year which you can do by bringing the map to a School Community Council Meetings and asking if there are any changes at the school that would affect the routes students take to school. Describe what you did to maintain their criteria in your midyear report.

3. One of my principals was wondering how to delete something off the map if it was accidentally placed in the wrong spot (for instance a misplaced cross walk or stop sign)?

To delete a symbol off the map make sure your black arrow sign is selected (symbols are located at the top of the maps on the toolbar) and then click on the symbol you wish to remove. Once Symbol is selected hit your delete button or hit the **X** button on your toolbar.

4. If your school in experiencing construction, how may SNAP maps must you turn in?

For reports, we only require you to turn in one map. I would encourage you and your schools to keep your SNAP maps as updated as possible to ensure students are walking and biking to school as safely as possible.

5. What if my school is resistant to doing a SNAP Map?

Remind your schools that this map will help your schools students walk and bike safely to school and once you have completed your first SNAP map it is much easier to maintain. You can also apply for Safe Routes to School grants once your school has completed its SNAP Map. If your school is still resistant enlist the help of your Local Health Department.
